

BHARATAGENTIC HACKATHON

Powered by aiKart

Build AI Agents. Solve Real Problems. Create Impact for Bharat.

1. Hackathon Overview

Welcome to the BharatAgentic Hackathon, powered by aiKart. The hackathon invites students, developers, innovators, and builders to design and build AI agents that solve meaningful real-world problems across India's key industries.

Participants can select a problem from one of the defined challenge categories or identify their own industry-specific problem. The objective is to move beyond simple chatbots and create intelligent, action-oriented agents that can understand problems, reason over information, use tools and data, automate workflows, and deliver measurable outcomes.

2. Challenge Categories

- **Citizen & GovTech** — Build agents that improve access to government services, public information, citizen support, documentation, grievance handling, and civic processes.
- **FinTech & Financial Services** — Build agents for financial analysis, fraud detection, financial assistance, compliance, customer support, lending, or business finance.
- **AgriTech & Rural Bharat** — Build agents that address challenges faced by farmers and rural communities, including crop advisory, market intelligence, agricultural planning, and access to services.
- **HealthTech** — Build agents that improve healthcare access, patient support, health information management, healthcare workflows, or administrative processes.
- **EdTech & Future Skills** — Build agents for personalized learning, career guidance, skill development, assessments, mentorship, or workforce readiness.
- **Manufacturing & Industry 4.0** — Build agents for predictive maintenance, quality control, production optimization, industrial intelligence, supply-chain operations, or workforce assistance.
- **Logistics & Mobility** — Build agents that optimize transportation, routing, fleet operations, delivery management, mobility services, or logistics workflows.

3. Build Your Own Problem Statement

Have an idea outside the listed categories? Build it. Participants are encouraged to identify a genuine problem in any industry and create an AI agent capable of solving or significantly improving that problem.

Your agent may:

- Research and gather relevant information.
- Understand, classify, and prioritize user requests.
- Make decisions using defined rules, context, or data.
- Communicate through chat, voice, or other interfaces.
- Automate repetitive or multi-step workflows.
- Connect with APIs, databases, and external tools.
- Analyze documents, datasets, or business information.
- Coordinate multiple tasks or specialized agents.
- Generate actionable recommendations.
- Execute permitted actions on behalf of users.

4. What You Need to Build

1. **Problem Statement:** Clearly define the real-world problem, its users, and why the problem matters.
2. **Agentic Solution:** Explain how your AI agent addresses the problem and what makes the solution agentic.
3. **Agent Workflow:** Show how the agent receives input, reasons about it, uses tools or data, and produces an outcome.
4. **Impact:** Explain the expected value, such as time saved, cost reduction, improved accessibility, increased efficiency, or better decision-making.
5. **Working Prototype:** Demonstrate a functional prototype. The solution should show the core workflow rather than only an idea or presentation.

5. Core Challenge

“Identify a meaningful problem. Build an intelligent agent. Give it the ability to reason and act. Create measurable impact for Bharat.”

6. What Makes a Strong Submission?

- A clearly defined and meaningful problem.
- A practical solution designed around an AI agent rather than a basic chatbot.
- A clear agent workflow involving reasoning, tools, data, or actions.
- A working prototype that demonstrates the core functionality.
- A realistic path to adoption and measurable impact.
- A solution that is responsible, secure, and appropriate for its intended users.

7. Hackathon Timing

Hackathon Build Window: 9:00 AM to 9:00 PM (sharp).

Submission Window: 8:00 PM to 10:00 PM.

Important: Teams must complete their hackathon work by 9:00 PM. Agent submissions will be accepted from 8:00 PM until 10:00 PM.

8. Submission Methods

Participants can submit their agent through either of the following two methods. In both cases, the complete agent must also be submitted through the official Google Form.

Method 1 — YAML / Agent Manifest Submission

1. Create a Dockerfile for your agent and ensure the agent runs correctly in a container.
2. Create the required YAML Agent Manifest file by following the official aiKart Agent Manifest Guide.

Guide: [aiKart Agent Manifest Guide \(PDF\)](#)

3. Use the following submission walkthrough video to submit your YAML-based agent.

Submission Video: [YAML / Agent Manifest Submission Walkthrough](#)

Method 2 — API Endpoint Submission

1. Host your agent so that it is accessible through an API endpoint.
2. Use the following submission walkthrough video to submit your hosted agent through the API endpoint process.

Submission Video: [API Endpoint Submission Walkthrough](#)

Mandatory Final Submission

After completing either submission method, submit your complete agent and the required details through the official hackathon Google Form.

Google Form: [Submit Your Complete Agent](#)

9. Final Message

BharatAgentic is an opportunity to turn real-world problems into practical AI solutions. Choose a challenge, identify an unmet need, or bring your own problem statement—and build an agent that can make a difference.
